

**Abstract of the Disclosure**

It is possible to provide an IA terminal user management system and a program for said system which

5 comprises: a unit which stores IA terminal information including an IA terminal identifier for identifying an IA terminal, service information including the kind of service to be received, and user registration information including user information concerning the user who

10 receives the service; a unit which transmits and receives user registration information to and from the IA terminal, and requests the IA terminal to input user registration information; a unit which collates the received user registration information with the stored user registration information, and a unit which obtains user

15 registration information which is not collated from the IA terminal and registers said information.
